

Creating an AWS Account

1. You need to go to <https://aws.amazon.com/>

and click on "Create a new AWS account"

2. First thing you have to do,

is to specify a route user email address

which is your main email address.

On top of it, you can specify a name for account.

For example, your name and click on "Verify email address"

3. You should be getting an email with the verification code

After verifying your accounts,

you have to set a root user password

and confirm this root user password.

4. Next, you specify that this is a personal accounts

and you enter your details for this accounts.

5. Next, you have to enter credit card details

and you will get an authorization

of \$1 onto this credit card.

So this is not a charge, is a pending transaction

and it's just an authorization that will be canceled.

And as long as you remain within the Free Tier,

you will not be charged.

But if you go over the Free Tier, then you will be charged.

6. After that step, you must confirm your identity

by providing a phone number and then receiving

either SMS or a voice call to confirm that phone number.

Then you must choose a support plan

and will use the basic support free for this course,

because that's all we need.

Then you complete the signup

It will take a few minutes to activate your account

and you'll receive an email when this is complete.
